

**HIGH PERFORMANCE  
ENVIRONMENTALLY FRIENDLY  
PATENTED HOT MIX**

**SUPERIOR PERFORMANCE**

**ECO-BRAWN™** is a superior performing hot mix paving mixture comprised of recycled asphalt and by-products generated during quarrying/mining operations.

**Are you looking to increase mix performance while simultaneously reducing your impact on the environment?**

- Durability and performance superior to 100 gyrations Superpave mixes with SIGNIFICANTLY less compaction effort.
- Recycle asphalt reduces virgin binder requirements.
- High quality, dust free silica sand improves workability and compact-ability efforts without compromising volumetric properties such as VMA and Air Voids.
- High strength Iron Mountain Trap Rock extends product life, improves skid resistance and decreases polishing when compared to traditional limestone mixes.
- Improved rut resistance.
- Moisture susceptibility (stripping) reduced. **ECO-BRAWN™** is designed to meet a minimum of 80% retained strength in accordance to AASHTO T 283, equaling highway Superpave mixtures.
